API Graduation Project

Objective:

- You are required to perform API testing on ELAGI website "https://elagi.semicorner.com/home" using Postman.
- Create a new collection and name it "Elagi API Testing" and save requests inside it.
- Type all possible tests for every request and ensure all tests pass successfully.
- Create and use dynamic variables in Postman for (emails, tokens, ….) to ensure that you can efficiently manage authentication and data across different requests.
- Explore the website to locate the API documentation.

Submission and due date:

- Use collection runner to run the collection one time after finishing the task.
- Make sure you save all your requests before exporting.
- Export your Postman collection and environment variables.

Due date: Friday (26 / 06 /2026) at 11:59 pm

Task:

➢ Authentication
